Enrich your home entertainment system with multimedia from your PC and the Internet

The Philips SL400i Wireless Multimedia Link increases the scope of your home entertainment system by giving you access to the multimedia content - online music, movie trailers, music videos, photo collections, Internet games - stored on your PC or streamed direct from the Internet. Using digital wireless technology, the SL400i lets you select and enjoy your personal multimedia collection, as well as the vast array of online Internet content, in the comfort of your living room. And while it's operating, it leaves the PC free for use to others!

The SL400i. No extra cables. Simple controls. More enjoyment.

Enjoy PC multimedia - music, movies, photos - on your TV and stereo
Navigate PC multimedia on your TV and stereo with the SL300i remote control

Access to Internet Entertainment (broadband internet required)

Online music, movie trailers, photo collections & games...
Listen to Internet audio stations on your living room Stereo set. Enjoy short movie clips, view photos & play online games on your TV. Whatever your taste in music, pictures, videos or games, you'll discover a dedicated collection of often updated online content. Unlike conventional radio or TV, you retain control over what you want to hear & see.

Content navigation & control

Operating the multimedia link is as easy as any other consumer device with known commands like play, previous, next & stop. Navigating content from your (huge) collection is made easy by filtering content by artist, album, genre or playlist.

INFO!

Want to know more about a song playing or order the CD? Request additional info by pressing the INFO! button on the Remote Control and receive via email containing information about the artist and the track. You can also link to retailers to buy the music.

My.Philips.com

Manage and personalize the choice of Internet content offered. Add, sort and delete Internet services and favorites.
