# Highlights

## Watch any device on a second TV

The wireless link uses standard SCART and cinch plugs that are used by almost every brand of audio/video device. If your device has one of these standard connectors it will work with the wireless link

## Choose 1 of 4 devices to watch

The easy way to switch between your DVD player, satellite receiver, VCR or set-top box without having to reconfigure your entire home cinema set-up. The wireless TV link has four separate inputs, each with its own SCART connector, to allow you to connect up to four devices.

## Works with DVD and many more

Extend your possibilities for viewing movies, sports events, live performances and a range of TV channels anywhere in your home. The wireless TV link is suitable for transmission of AV content of all brands of PayTV and Pay-per-View decoders, satellite receivers, set-top boxes, DVD players, VCRs and camcorders.

## Works with almost all brands

The wireless link uses standard SCART and cinch plugs that are used by almost every brand of audio/video device.

## One touch access to 4 devices

There's no need to swap cables at the transmitter to view any video device on the second TV. Simple press the input selection button to switch from input device.

## Operates in a closed cabinet

If you store your audio/video devices in a cabinet, you cannot operate these devices with a normal IR remote control. The Philips wireless remote control link allows you to operate these devices when the cabinet doors are closed thanks to an RF-based link that picks up the infrared signals of a remote control and translates them into RF. The receiver unit then translates them back to IR.

## Wireless means no drilling

A 2.4 GHz wireless link between the receiver and transmitter means you don't have to lay cables or drill holes through walls.

## Wireless passes through walls

There's no need to buy or rent duplicate A/V equipment. The wireless RF system extends your possibilities for viewing DVD movies and your favourite Satellite or TV channels anywhere in your home. With a range of up to 30 metres inside the house, it delivers high-quality video and stereo audio no matter where your second TV is located.
